

Ideation Phase

Brainstorm & Idea Prioritization

Date	19 June 2026	Team ID	24EG105H34
Project Name	HouseHunt – House Rent Management System	Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement**Problem Statement**

Finding rental houses through traditional methods such as brokers, newspaper advertisements, social media posts, and personal references is time-consuming and inefficient. Tenants often struggle to find accurate property information, while property owners face difficulties in reaching potential tenants and managing property listings effectively. There is a need for a centralized platform that simplifies property searching, property listing, and rental management through a secure and user-friendly web application.

Step-2: Brainstorm, Idea Listing and Grouping**List of Ideas**

Centralized web platform for rental property listings
Role-based access for Tenants, Owners, and Administrators
JWT-based secure authentication system
Property search and filtering by location, price, and type
Online booking management system for rental properties
Direct communication between tenants and property owners
Admin dashboard for monitoring users and properties
Image upload support for property listings
CRUD operations for property management
Responsive UI using React.js and Bootstrap

Grouping of Ideas**User Management**

Registration with role selection

Property Management

Property listing with images

 Build for free ×

Secure Login with JWT

Profile management

Admin user control

CRUD operations for owners

Search and filter system

Admin property control

Booking & Communication

Online booking management

Booking history tracking

Direct tenant-owner interaction

Booking status tracking

Platform & Infrastructure

MERN Stack architecture

Responsive React.js frontend

RESTful API backend

MongoDB database integration

Brainstorming MindMap

Step-3: Idea Prioritization

Prioritization Table

S.No	Idea	Feasibility	Impact	Priority
1	Centralized Rental Platform (HouseHunt)	High	High	Selected
2	Property Search & Filter System	High	High	Included
3	Booking Management System	Medium	High	Included
4	JWT Authentication & Security	High	High	Included
5	Admin Dashboard & Monitoring	Medium	Medium	Included
6	Real-time Chat System	Low	Medium	Future Scope
7	Online Payment Integration	Low	High	Future Scope

Final Selected Idea

HouseHunt – House Rent Management System

Reason for Selection

HouseHunt was selected because it addresses a real-world problem faced by tenants and property owners. The project is technically feasible using the MERN Stack and provides opportunities to implement modern web technologies such as React.js, Node.js, Express.js, MongoDB, JWT Authentication, CRUD Operations, and Role-Based Access Control. The system offers practical value and has significant scope for future enhancements.
