

Project Design Phase

Problem – Solution Fit Template

Date	19 June 2026	Team ID	24EG105H34
Project Name	HouseHunt – House Rent Management System	Maximum Marks	2 Marks

Customer Segment

Tenants, Property Owners, and Administrators

Problem

Finding rental properties through traditional methods is time-consuming and inefficient. Tenants often depend on brokers, advertisements, and personal contacts, making the process slow and unreliable. Property owners face difficulties in reaching potential tenants and managing property listings effectively.

Existing Alternatives

- Property Brokers
- Newspaper Advertisements
- Social Media Groups
- Personal References
- Local Property Agents

Pains

- Difficulty finding verified properties
- High broker commissions
- Incomplete property information
- Time-consuming property search
- Lack of direct communication with owners

Benefits / Gains

- Faster property discovery
- Reduced dependency on brokers
- Verified property information
- Easy property comparison
- Improved communication

Limited property comparison options

Secure and user-friendly platform

Solution

HouseHunt is a web-based house rent management system that enables users to search, filter, view, and manage rental properties through a centralized platform. It provides secure authentication, property management, booking management, and direct interaction between tenants and property owners.

Key Features

- User Registration and Login

Property Listing Management

Property Search and Filtering

Booking Management
- Role-Based Access Control

Admin Dashboard

Secure JWT Authentication

Image Upload Support

Unique Value Proposition

A centralized rental property management platform that simplifies property discovery, property management, and booking operations through secure and efficient digital services.

Expected Outcome

- Simplified rental process

Increased user satisfaction

Better property visibility

Efficient property management

Improved operational efficiency
