

Project Design Phase

Proposed Solution Template

Date	19 June 2026	Team ID	24EG105H34
Project Name	HouseHunt – House Rent Management System	Maximum Marks	2 Marks

Proposed Solution

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Finding rental properties through traditional methods is time-consuming, unreliable, and dependent on brokers. Property owners face challenges in managing listings and reaching potential tenants efficiently.
2	Idea / Solution Description	HouseHunt is a web-based house rent management system that allows tenants to search, filter, and book rental properties while enabling property owners to manage property listings through a centralized platform.
3	Novelty / Uniqueness	The system combines property management, property search, booking management, secure authentication, and role-based access control within a single platform for tenants, owners, and administrators.
4	Social Impact / Customer Satisfaction	The solution reduces dependency on brokers, provides verified property information, saves time, improves transparency, and enhances the overall rental experience for users.
5	Business Model (Revenue Model)	Premium property listings, featured advertisements, subscription plans for property owners, and service charges for advanced platform features.
6	Scalability of the Solution	The system is developed using the MERN Stack architecture, allowing easy expansion with features such as online payments, real-time chat, mobile applications, property recommendations, and cloud deployment.
